PC PhoneHome and MacPhoneHome is also available in an Enterprise version for large scale deployment to organizations with many computers.

Why is PC PhoneHome™ and MacPhoneHome™ so successful ?

In some large institutions in the United States where it is in use, computer theft has been reduced by up to 90%. Even when computers have been stripped, PC PhoneHome has been successful in helping to recover them.

Some Testimonials:

John L. - Cannington, Western Australia

"I am a project officer for the Crime Prevention Division in Western Australia. Your product is currently been endorsed as a crime preventative measure against computer crime."

Thomas S. - Newark, New Jersey

"Your service is invaluable! I thought my laptop was gone forever... With your help and GREAT software, it was returned to me in a few days. Thanks for all your help."

Director of Security, Eugene C. - New York City

"Prior to using PC PhoneHome, we were losing 10-12 laptops a month corporate-wide. Since deploying your Enterprise version we haven't lost one. Your recovery track record is 100% dead on and has made me look like a genius to my boss. Thanks for all the good work."

For 10 minutes installation time you can have years of security, knowing you stand a good chance of recovering your computer and possibly your data if it is ever lost or stolen.

PC PhoneHome" and MacPhoneHome" secretly send an invisible email message to an email address of your choice containing the physical location of your computer every time you get an Internet connection.

When the stolen or lost computer goes online, it will send a stealth message to the pre-determined e-mail address containing its exact location. Once this information is received, Brigadoon Security or their Australian agents, Trace Technologies, provide full technical and recovery support. Their recovery agents work with you, global ISPs and the investigating law enforcement agency to recover your stolen property.
